

Eastern Interconnection Planning Collaborative

Status of Action and Review Items

Transmission Options Task Force Meeting
February 22-23, 2012

Action & Review Items – Capacity

- Scenario 2 – CT capacity additions in MISO_WUMS have been appropriately distributed consistent with the anomaly fix; corrected spreadsheets have been posted.
- Total installed capacity values (based on summer maximum capacity) are now included with generation dispatch spreadsheets as new tab (see installed capacity by technology).

Action & Review Items - Deactivations

- Deactivation Approach document has been updated to reflect that the same approach will be used for all fossil units
- Deactivations – Planning Authorities have been instructed to take note of request to cross reference NEEM deactivations with SSI data on planned retirements and indicate which units are which.

Action & Review Items – Misc.

- HVDC Approach updated to reflect how costs will be factored into the decision to select HVDC.
- Detail added to “Less-than-peak Case” document
- CEI process for TOTF meetings has been finalized and posted.
- Detailed weekly schedule has been updated and posted.
