EIPC Webinar
Phase II
Methods to Prioritize Coal Unit
Dispatch

November 4, 2011

Introduction

- The EIPC fossil unit dispatch methods
 - Based on stakeholder specifications
 - three scenarios for Phase II work
 - high level
- EIPC analysis – only useful in the EIPC grant context, not appropriate for non-grant use

Dispatch Method

- A. NEEM output – Units 200 MW or larger
- B. NEEM output – Units smaller than 200 MW
 - NEEM identifies aggregate small unit operation.
 - Regional discretion to group its pool of smaller units into scaling “tranches” based characteristics
 - Achieve MW reductions by aggregate scaling
- C. Method to classify coal units by size, age and pollution control retrofits
